P1

The proud warrior class of the samurai (meaning 'those who serve') grew from a band of mercenaries hired by feudal landowners in the 11th century to win them the control of Honshu, Japan's main island. These mercenaries lived by the cult of the sword, worshipping athletic ^{expertise} prowess and martial skills. They developed a fierce loyalty to their masters and a fearlessness that made them formidable adversaries. They fought in elaborate armour, wielding their most prized possession, a double-edged sabre with which they could cut a man in half.

one that cannot be defeated

sword

Later the spartan principles of Zen Buddhism, with its love of nature softened their fighting zeal. It became fashionable for them to live sparse and frugal lives during the Kamakura era (1192-1333), when the ruling warrior family Minamoto moved their seat of power to the eastern city of Kamakura.

P1

The proud warrior class of the samurai (meaning 'those who serve') grew from a band of mercenaries hired by feudal landowners in the 11th century to win them the control of Honshu, Japan's main island. These mercenaries lived by the cult of the sword, worshipping athletic prowess and martial skills. They developed a fierce loyalty to their masters and a fearlessness that made them formidable adversaries. They fought in elaborate armour, wielding their most prized possession, a double-edged sabre with which they could cut a man in half.

Later the spartan principles of Zen Buddhism, with its love of nature softened their fighting zeal. It became fashionable for them to live sparse and frugal lives during the Kamakura era (1192-1333), when the ruling warrior family Minamoto moved their seat of power to the eastern city of Kamakura.

Who are usually referred to as mercenaries?

- (a) Soldiers with martial skills
- (b) Proud warriors
- ☒ (c) Soldiers who fight for money
- (d) Loyal warriors

degree of comp.

Identify the type of error in the sentence:

"The cost of this project will be much lesser than 5% more than that predicted earlier".

- (a) syntactical error
- (b) punctuation error
- ✓ (c) grammatical error
- (d) conflicting words

↓↓
much less / lesser

P2

Capacity that is not used

IDLE CAPACITY

While cement is the basic raw material for producing cement tiles and cement paint which are used extensively in building construction. The main consumers of white cement are, therefore, cement tile and cement paint manufacturing units. These consumers, mostly in the small scale sector, are today facing a major crisis because of a significant increase in the price of white cement during a short period. The present annual licensed production capacity of white and grey cement in the country is approximately 3.5 lakh tones. The average demand is 2-2.5 lakh tones. This means that there is idle capacity to the tune of one lakh tones or more. The price rise is, therefore, not a phenomenon arising out of inadequate production capacity but evidently because of artificial scarcity created by the manufacturers in their self-interest.

→ rise in price → no control

The main reason for the continuing spurt in cement price is its decontrol. As it is, there is stiff competition in the cement paint and tile manufacturing business. Any further price revision at this stage is bound to have a severe adverse impact on the market conditions. The Government should take adequate steps to ensure that suitable controls are brought in. Else it should allow import of cement.

P2

→ essential

basic ↔ acidic

While cement is the basic raw material for producing cement tiles and cement paint which are used extensively in building construction. The main consumers of white cement are, therefore, cement tile and cement paint manufacturing units. These consumers, mostly in the small scale sector, are today facing a major crisis because of a significant increase in the price of white cement during a short period. The present annual licensed production capacity of white and grey cement in the country is approximately 3.5 lakh tones. The average demand is 2-2.5 lakh tones. This means that there is idle capacity to the tune of one lakh tones or more. The price rise is, therefore, not a phenomenon arising out of inadequate production capacity but evidently because of artificial scarcity created by the manufacturers in their self-interest.

→ unnatural

The main reason for the continuing spurt in cement price is its decontrol. As it is, there is stiff competition in the cement paint and tile manufacturing business. Any further price revision at this stage is bound to have a severe adverse impact on the market conditions. The Government should take adequate steps to ensure that suitable controls are brought in. Else it should allow import of cement.

vocab

Which of the following words has the same meaning as the word 'artificial' as used in the passage?

~~(a) Deliberate~~

(c) Practical

(b) Prolonged

(d) Unnatural

→ for a long time

P3

→ people who study humanity.
Anthropologist have placed together the little they know about the history of left-handedness and right-handedness from indirect evidence. Though early men and women did not leave written records, they did leave tools, bones, and pictures. Stone Age hand axes and hatchets were made from stones that were carefully chipped away to form sharp cutting edges. In some, the pattern of chipping shows that these tools and weapons were made by right handed people, designed to fit comfortably into a right hand.

Other Stone Age implements were made by or for left-handers. Prehistoric pictures, painted on the walls of caves, provide further clues to the handedness of ancient people. A right-hander finds it easier to draw faces of people and animals facing toward the left, whereas a left-hander finds it easier to draw faces facing toward the right. Both kinds of faces have been found in ancient painting.

On the whole, the evidence seems to indicate that prehistoric people were either ambidextrous or about equally likely to be left or right handed. But in the Bronze Age, the picture changed. The tools and weapons found from that period are mostly made for right handed use. The predominance of right handedness among humans today had apparently already been established.

people who know to use both hands left & right

P3

Anthropologists have placed together the little they know about the history of left-handedness and right-handedness from indirect evidence. Though early men and women did not leave written records, they did leave tools, bones, and pictures. Stone Age hand axes and hatchets were made from stones that were carefully chipped away to form sharp cutting edges. In some, the pattern of chipping shows that these tools and weapons were made by right-handed people, designed to fit comfortably into a right hand.

Other Stone Age implements were made by or for left-handers. Prehistoric pictures, painted on the walls of caves, provide further clues to the handedness of ancient people. Both kinds of faces have been found in ancient painting.

On the whole, the evidence seems to indicate that prehistoric people were either ambidextrous or about equally likely to be left or right-handed. But in the Bronze Age, the picture changed. The tools and weapons found from that period are mostly made for right-handed use. The predominance of right-handedness among humans today had apparently already been established.

Which of the following development occurred around the time of Bronze Age?

- (a) The establishment of written records
- (b) A change in the styles of cave painting
- (c) A increase in human skill in the handling of tools
- (d) The prevalence of right handedness

P3

*idea
theme*

Anthropologists have placed together the little they know about the history of left-handedness and right-handedness from indirect evidence. Though early men and women did not leave written records, they did leave tools, bones, and pictures. Stone Age hand axes and hatchets were made from stones that were carefully chipped away to form sharp cutting edges. In some, the pattern of chipping shows that these tools and weapons were made by right-handed people, designed to fit comfortably into a right hand.

Other Stone Age implements were made by or for left-handers. Prehistoric pictures, painted on the walls of caves, provide further clues to the handedness of ancient people. A right-hander finds it easier to draw faces of people and animals facing toward the left, whereas a left-hander finds it easier to draw faces facing toward the right. Both kinds of faces have been found in ancient painting.

On the whole, the evidence seems to indicate that prehistoric people were either ambidextrous or about equally likely to be left or right-handed. But in the Bronze Age, the picture changed. The tools and weapons found from that period are mostly made for right-handed use. The predominance of right-handedness among humans today had apparently already been established.

What is the main idea conveyed through the passage?

- (a) The purpose of ancient implements
- (b) The significance of prehistoric cave paintings
- ☒ (c) The history of right-handedness and left-handedness
- (d) The pattern of chipping ancient tools

P3

Anthropologists have placed together the little they know about the history of left-handedness and right-handedness from indirect evidence. Though early men and women did not leave written records, they did leave tools, bones, and pictures. Stone Age hand axes and hatchets were made from stones that were carefully chipped away to form sharp cutting edges. In some, the pattern of chipping shows that these tools and weapons were made by right handed people, designed to fit comfortably into a right hand.

Other Stone Age implements were made by or for left-handers. Prehistoric pictures, painted on the walls of caves, provide further clues to the handedness of ancient people.
